

Signature of operate in deprivation of sign

Masaaki Yamaguchi

Norm dessert with flower operate integral in quantum level of deprivation equation littellate with being from time scale to gravity scale of manifold volume into being assemble manufacture.

$$||ds^2|| = \oint [(i\hbar\nabla)^{\oplus L}] d\mathbb{X} = \square$$

This scale of assemble level is D-brane of being sheap scale with being constructed, and secure product function prevelige with projection in anti-gravity.

$$\frac{V}{S} = \pi ||\oint [D^2\psi \otimes (S^m, S^n)]||^2 dr$$

$$\nabla : \square \rightarrow \square$$

Also, this function almostly construct wth quantum equation fo Heisenberg equation.

$$\ll \Delta | \nabla \gg = i\hbar\psi$$

And, more also, this function developpe with logment and squart of g element beign belong to harf of gravity value.

$$(\square/\nabla) = \frac{1}{\log x} = \sqrt{g}$$

$$\frac{m^{L+1}}{m+1} = {}^t \text{ffff} \text{cohomD}_\chi[I_m]$$

And, this function also belong from being Beta function to varint of three integral of Cohomology. Then, gravity equation be project with fundamental function.

$$\square : |\chi \rightarrow \pi(\chi, x)$$
