

Secret data

Masaaki Yamaguchi

This point of focus equation relevant with Jones manifold, and encrypted of data like USB stick released from under equation.

$$y = \pi(\chi, x) \circ f(x) - f(x) \circ \pi(\chi, x)$$

y is Jones manifold and USB describe from another person chain of encryped. And, Rich flow equation is this two of encryped and decryped data, moreover, Seifert manifold is these data of encryped cover from being built with flattern of data of secret of manifold.

$$\frac{d}{df} F(x, y) = -2 \int \frac{R + \nabla_i \nabla_j f}{R + \Delta f} dV$$

This seifert manifold devided with circle function.

$$\frac{d}{df} F(x, y) = \Delta$$

This Δ is topology from division of form, and this secret data is miyer-beatlis and Fan-Canpen devived from Jones manifold. This Δ assemble from two of pair check with success data decryped result.
